for loop questions
name: Dawod Anseahmand
Department: SE

1. Print Numbers 1 to 10

Write a program that uses a for loop to print numbers from1 to 10.

answer:

```
public class Main {
 public static void main(String[]args) {
 int i;
 for (i=1; i<=10; i++) {
 System.out.println(i);
 }
 }
}
```

2. Print N Numbers

Ask the user to enter a number N, then print the numbers from 1 to N using a for loop.

Answer:

```
import java.util.Scanner;

public class Main {
    public static void main(String[]args) {
        Scanner input = new Scanner(System.in);
        while (true) {
            System.out.println("Enter the n number:");
            int n = input.nextInt();
            int i;
            for (i = 1; i <= n; i++) {
                System.out.println(i);

            }
        }
```

```
    }
}
```

3. Multiplication Table

Take a number from the user and print its multiplication table(up to 10) using a for loop.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
 while (true) {
 System.out.println("Enter the number:");
 int n = input.nextInt();
 int i;
 for (i = 1; i <= 10; i++) {
 System.out.println( i + "x" + n + "="+i*n);

 }
 }
 }
}
```

4. Even Numbers from 1 to 50

Write a program to print all even numbers between1 and 50 using a for loop.

Answer:

```
public class Main{
 public static void main(String[]args) {
 int i;
 for (i=2; i<=50; i+=2) {
 System.out.println(i);
 }
 }
}
```

5. odd Numbers from 1 to 50

Write a program to print all odd numbersbetween1 and 50 using a for loop.

Answer:

```
public class Main{
 public static void main(String[]args) {
 int i;
 for (i=1; i<=50; i+=2) {
 System.out.println(i);
 }
 }
}
```

6. Reverse Counting

Print numbers from100 down to 1 using a for loop.

Answer:

```
public class Main{
 public static void main(String[]args) {
 int i;
 for (i=100; i>=1; i--) {
 System.out.println(i);
 }
 }
}
```

7. Positive and Negative Numbers

A user enters 10 integers. Write a Java program using a for loop to count how many numbers are positive, negative, or zero. Display the three counts at the end.

Answer:

```
import java.util.Scanner;
public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);

 int positive =0;
 int negative =0;
 int zero =0;
 for (int i =1; i<=10; i++) {
 System.out.println("Enter the number" + i + " :6" +
 "" +);
 int n = input.nextInt();
 if (n>0) {
 positive++;
 }else if (n<0) {
 negative++;
 }else{
 zero++;
 }
 }
 System.out.println("positive number" +positive);
 System.out.println("negative number" +negative);
 System.out.println("zero" + zero);
 }
}
```

end!
