Easy Question
nested if question
name: Dawod Aneshmand
department: SE

1:- a university wants to develop a java program to determine whether a student is eligible for admission based on the following conditions
1. the program should input the student's age and marks.
2. if the student's age is 18 or above, check the student's marks.
3. if the marks are 60 or above, display "admission approved".
4. otherwise, display "admission rejected: marks are insufficient."
5. if student age is below 18,display "admission rejected : age requirment not met".

Task: Write a Java program using the Scanner class and nested if statements to implement the admission system.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args){
 Scanner input = new Scanner(System.in);
 System.out.println("Enter your age:");
 int age = input.nextInt();
 System.out.println("Enter your score:");

 int score = input.nextInt();
 if (age >= 18) {
   if (score>=60) {
   System.out.println("Admission approved");
 }
 else {
   System.out.println("admission reject:marks are insufficient");
 }

       }else {
```

```
        System.out.println("Admission reject : age requirement not met ");

    }
  }
```

2:- ATM Withdrawal System

A bank wants to develop a Java program to process ATM withdrawals according to the following conditions:

1. Input the account balance and the withdrawal amount.
2. If the withdrawal amount is greater than zero, check whether the account balance is sufficient.
3. If the balance is sufficient, display "Withdrawal Successful."
4. Otherwise, display "Insufficient Balance."
5. If the withdrawal amount is zero or negative, display "Invalid Withdrawal Amount."

Task: Write a Java program using the Scanner class and nested if statements.

Answer:

```
import java.util.Scanner;

public class Main {
  public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
    System.out.println("Enter your amount blance:");
 double amountBlance = input.nextDouble();
    System.out.println("Enter your whithdrawal:");
 double withdrawal = input.nextInt();
 if (withdrawal>0)  {
    if (amountBlance>=withdrawal) {
     System.out.println("withdrawal successful");

 }else{
    System.out.println("insufficient blance");
   }
  }
 else if (withdrawal<=0) {
    System.out.println("invalid withdrawal amount100");
      }
   }
}
```

3:-

Employee Bonus Eligibility

A company wants to determine whether an employee qualifies for a bonus based on their years of service and performance score.

1. Input the employee's years of service and performance score.
2. If the employee has worked for at least 3 years, check the performance score.

3. If the performance score is 80 or above, display "Employee is Eligible for Bonus."
4. Otherwise, display "Performance Score is Insufficient."
5. If the employee has worked for less than 3 years, display "Insufficient Years of Service."

Task: Write a Java program using nested if statements to determine bonus eligibility.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
 System.out.println("Enter your years of services:");
 int years = input.nextInt();
 System.out.println("Enter your performance score:");
 int score = input.nextInt();
 if (years>=3)  {
 if (score>=80) {
 System.out.println("employee is eligible for bonus");

 }else{
 System.out.println("performance score is insufficient");
 }
 }
 else if (years<3) {
 System.out.println("insufficient years of service");
 }
 }
}
```

4:- Online Shopping Discount

An online store provides discounts based on the customer's purchase amount and membership status.

1. Input the total purchase amount and membership status (true or false).
2. If the purchase amount is at least 5,000, check whether the customer is a member.
3. If the customer is a member, display "Discount: 20%."
4. Otherwise, display "Discount: 10%."
5. If the purchase amount is less than 5,000, display "No Discount Available."

Task: Write a Java program using the Scanner class and nested if statements.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
 System.out.println("Enter your purchase:");
 int purchase = input.nextInt();
 System.out.println("are you a member? (true/false):");
 boolean member  = input.nextBoolean();
 if (purchase>=5000)  {
 if (member==true) {
 System.out.println("dicount: 20%");
```

```
            }else{
                System.out.println("discont: 10%");
            }
        }
       else {
            System.out.println("no discount is not available");
        }
    }
}
```

5:- Driving License Eligibility

A transport department wants to check whether a person is eligible to obtain a driving license.

1. Input the person's age and whether they have passed the driving test (true or false).
2. If the person's age is 18 or above, check the driving test result.
3. If the person has passed the test, display "Driving License Approved."
4. Otherwise, display "You Must Pass the Driving Test."
5. If the person's age is below 18, display "You Are Too Young to Obtain a Driving License."

Task: Write a Java program using nested if statements to implement the eligibility check.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
 System.out.println("Enter your age:");
 int age = input.nextInt();
 System.out.println("have you passed the driving test? (true/false):");
 boolean passed = input.nextBoolean();
 if (age>=18)  {
 if (passed) {
 System.out.println("driving license approved");

 }else{
 System.out.println("you have to pass the driving test");
 }
 }
 else {
 System.out.println("you are too young to obtain a driving license");
 }
 }
}
```

6:- University Scholarship System

A university wants to award scholarships to students based on their marks and family income.

1. Input the student's marks and annual family income.
2. If the student's marks are 85 or above, check the annual family income.

3. If the family income is 200,000 or less, display "Full Scholarship Awarded."
4. Otherwise, display "Partial Scholarship Awarded."
5. If the student's marks are below 85, display "Not Eligible for Scholarship."

Task: Write a Java program using nested if statements to determine the student's scholarship status.

Answer:

```
import java.util.Scanner;

public class Main {
 public static void main(String[]args) {
 Scanner input = new Scanner(System.in);
 System.out.println("Enter student's mark:");
 double mark = input.nextDouble();
 System.out.println("Enter family annual income:");
 double income = input.nextDouble();
 if (mark>=85)  {
 if (income<=200000) {
 System.out.println("full scholarship awarded");

 }else{
 System.out.println("partial scholarship awarded");
 }
 }
 else {
 System.out.println("not eligible for scholarship ");
 }
 }
}
```

end!
